

## Lupin launches anti-depressant capsules in US

**PRESS TRUST OF INDIA**

New Delhi, September 3

Drug major Lupin has launched generic anti-depressant drug Duloxetine in 40 mg strength in the US market.

Lupin had earlier launched Duloxetine HCl DR Capsules in strengths of 20 mg, 30 mg and 60 mg in December, 2013, which are the generic equivalent of Eli Lilly & Company's Cymbalta DR capsules in similar strengths.

Lupin is now the only generic manufacturer to offer all Duloxetine dosage strengths — the 20 mg, 30 mg, 60 mg, and now the newest 40 mg, Lupin said in a statement.

Lupin Pharmaceuticals, Inc, the US-based subsidiary of the company has launched its Duloxetine 40 mg delayed-release (DR) capsule.
